

Quality, Safety & Improvement – A Vision for the Future

David Pearson – Chair, TEC Quality

Wendy Hodgson – Lead Auditor, TEC Quality

The International
Technology Enabled Care
Conference 2019

15th-16th Oct 2019
The ICC, Birmingham

The voice of technology
enabled care

OUR VISION

PEOPLE CHOOSING
TECHNOLOGY ENABLED CARE
TO ENRICH EVERYDAY LIFE

Transforming the Technology Enabled Care sector through a commitment
to growth, membership support and driving quality

OUR MISSION

TO DRIVE THE
TRANSFORMATION OF
THE TEC INDUSTRY

TSA[®]

Membership

Business transformation and growth

Strategic influencing and lobbying

Training and workforce development

Events and networking

TEC
Quality

Strategic influencing
and lobbying

Technical guidance

Quality Standards Framework
auditing and certification

ONE VISION

People choosing Technology Enabled Care to enrich everyday life

DUAL MISSION

TSA will drive the transformation and growth of the TEC industry
TEC Quality will provide independent audit and certification

VALUES

Committed to Making a Difference
Inspiring Trust and Confidence
Strong Together

Vision and Ambition – TEC Quality

Giving confidence to users in digital tools and services.

Promoting safety, quality and innovation through accreditation

The Development of Services

- Modern TEC is best when it includes the effective use of data; blends into consumer technologies and has the service wrap around.
- The process of quality assurance must promote service innovation and improvement rather than stifle it
- There are major changes in the TEC world, including consumer technologies and analogue to digital. The trick is to use them as a springboard, rather than a hurdle to be overcome.
- In delivering this ambition there is considerable potential for mutual benefit for users, commissioners and providers.
- We must strive for development, innovation and improving standards.
- Everyone should seek to be accredited

Market Issues and changes

- Will we see a national commitment to digital alarms?
- We may see a shift to a smaller number of aggregated service suppliers.
- Will complexities of digital 'landlines' mean that UK follows Sweden, shifting to a simpler mobile model?
- Private pay channels will play an important role in digitally-enabled TEC, for proactive services and smart technologies given current policy re paying for social care.
- How will TEC standards apply to services adopting an 'internet of things', and a wide spectrum of smart apps & devices?
- How to assure current social alarm and standards (EN50134) if we accept for example the loss of 24-hour battery back-up on digital networks?

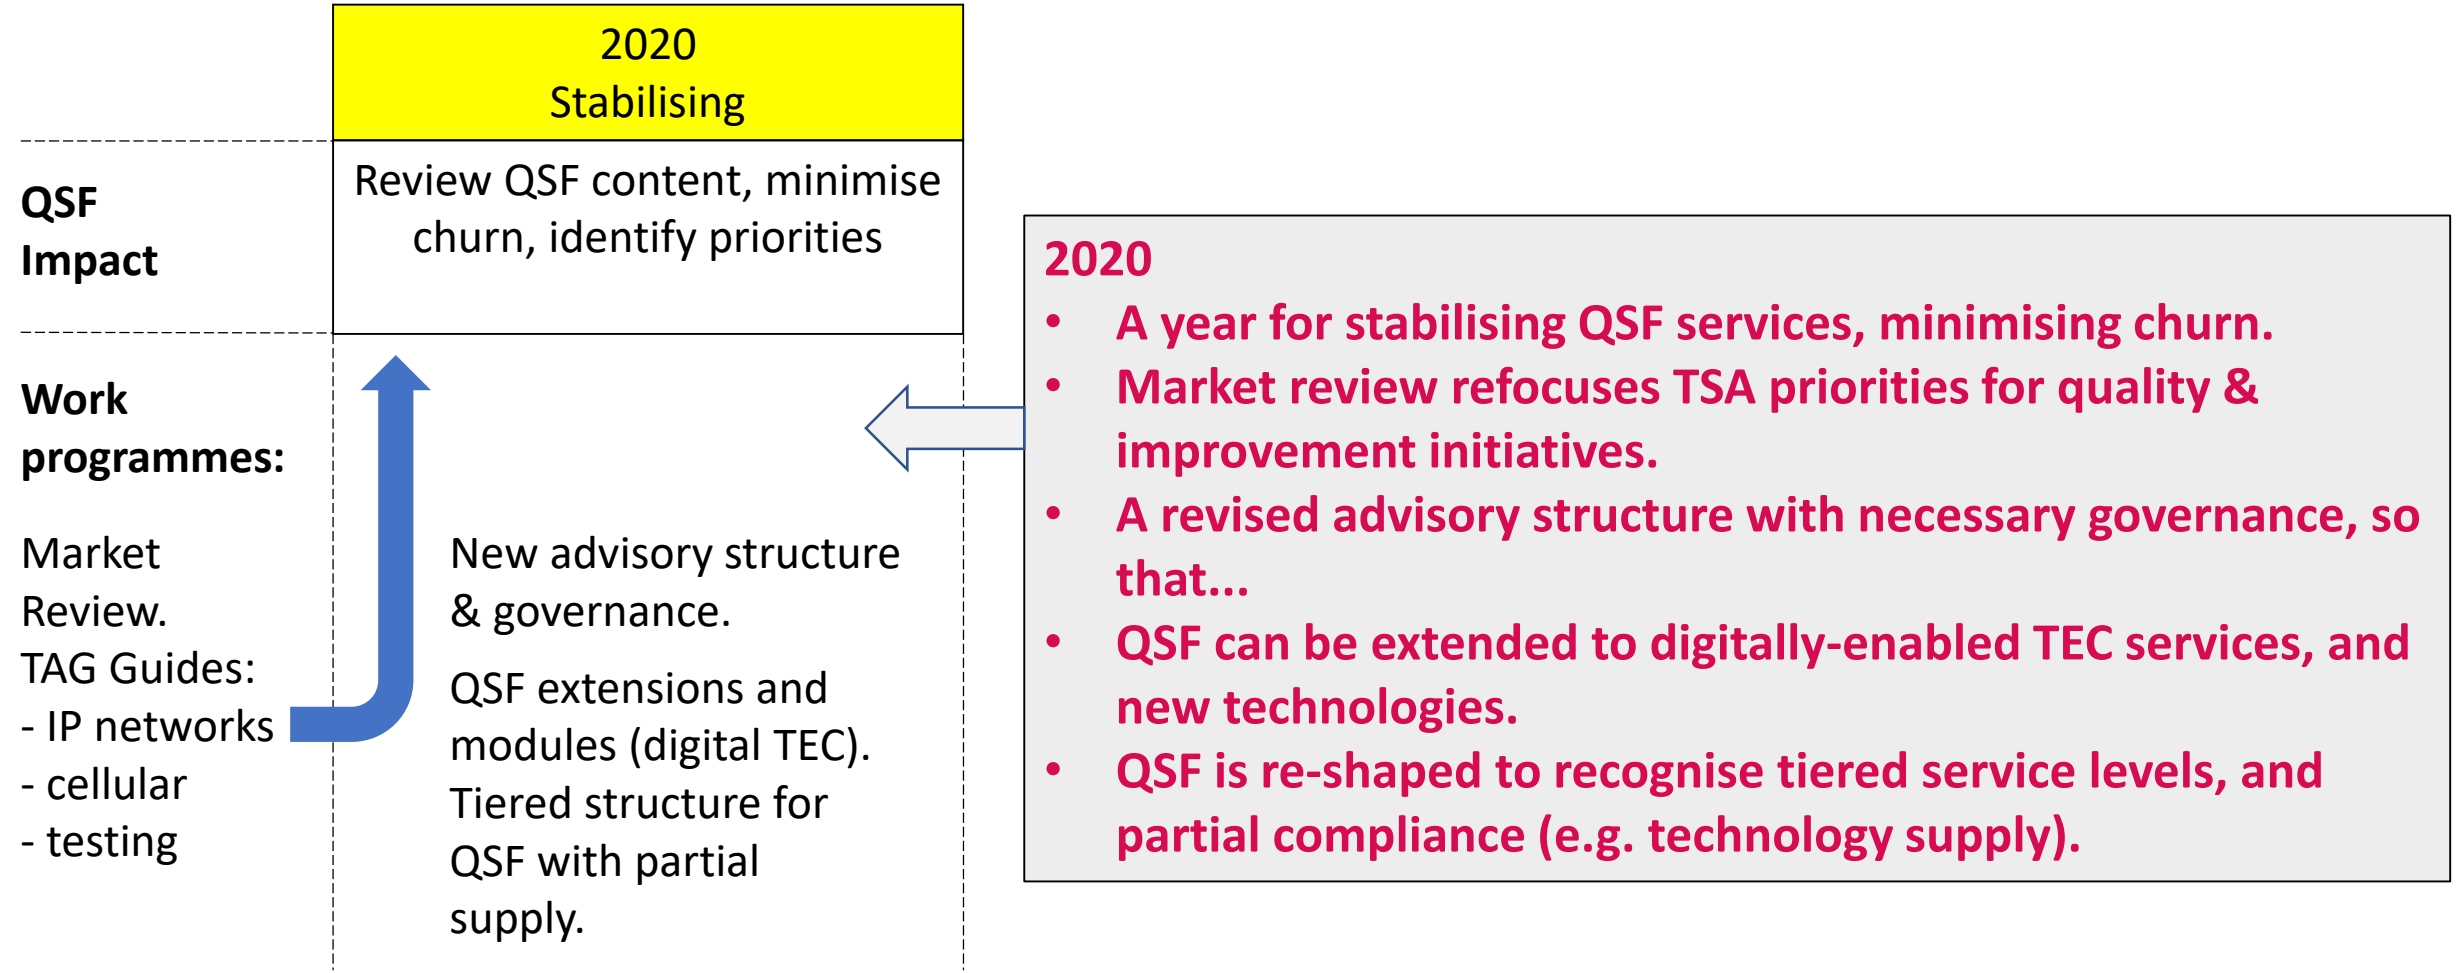

Operational Challenges

- We are seeing increasing demands for support, from communications issues to the specification and procurement of new systems & services.
- The TEC Quality Standards Framework needs to evolve and extend, through a controlled process that retains trust by evidencing good governance.
- Parallel developments are needed, to ensure that the TEC market adjusts and develops.
- We will need to leverage contributions from multiple TEC organisations and experts, to deliver standards, guidance, training and development content.
- The supply sectors will be critical to success. TEC Quality will demonstrate its independence in the application of quality assurance

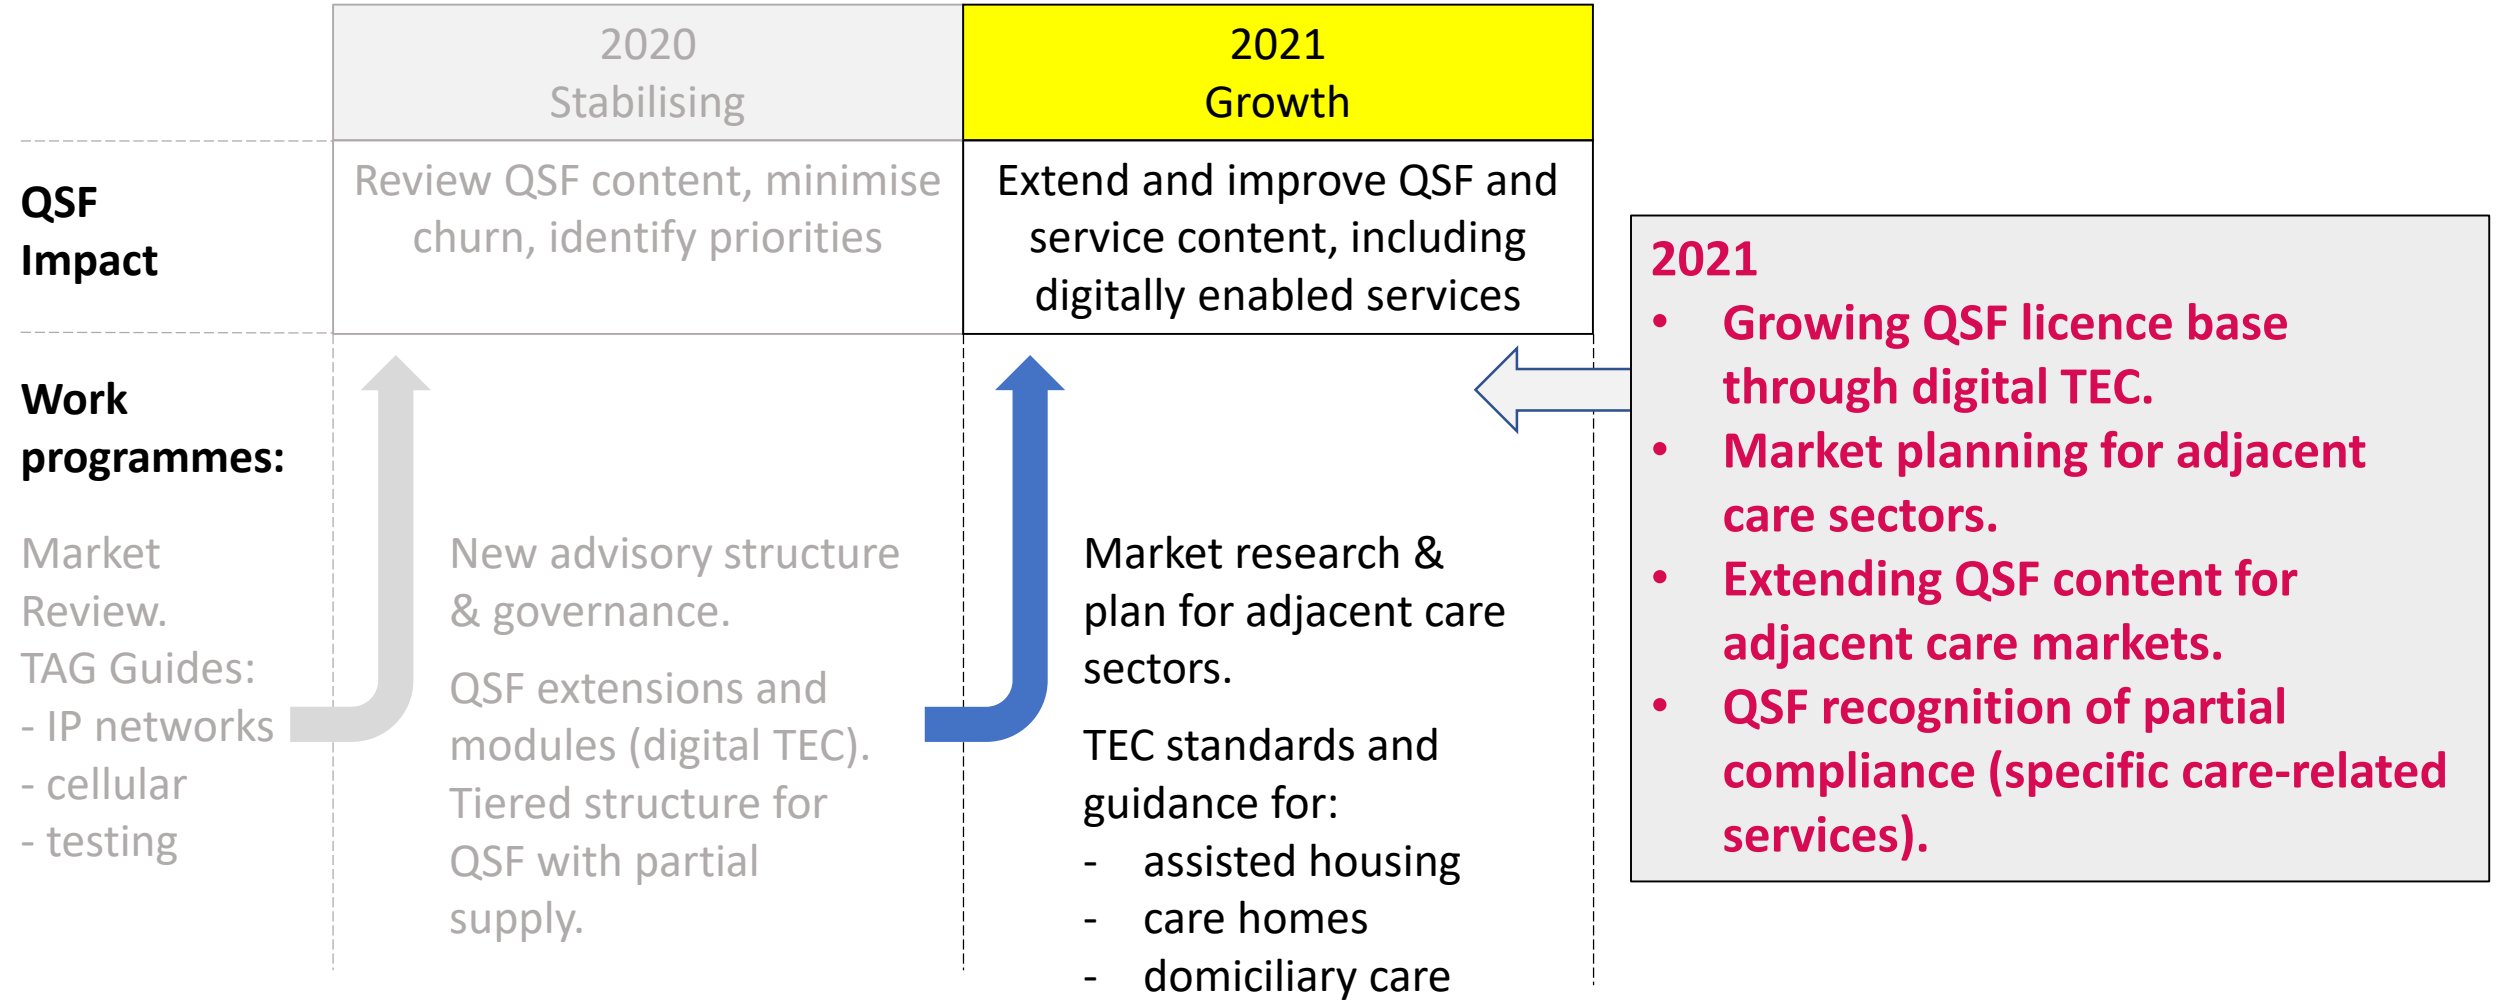

Roadmapping the changes

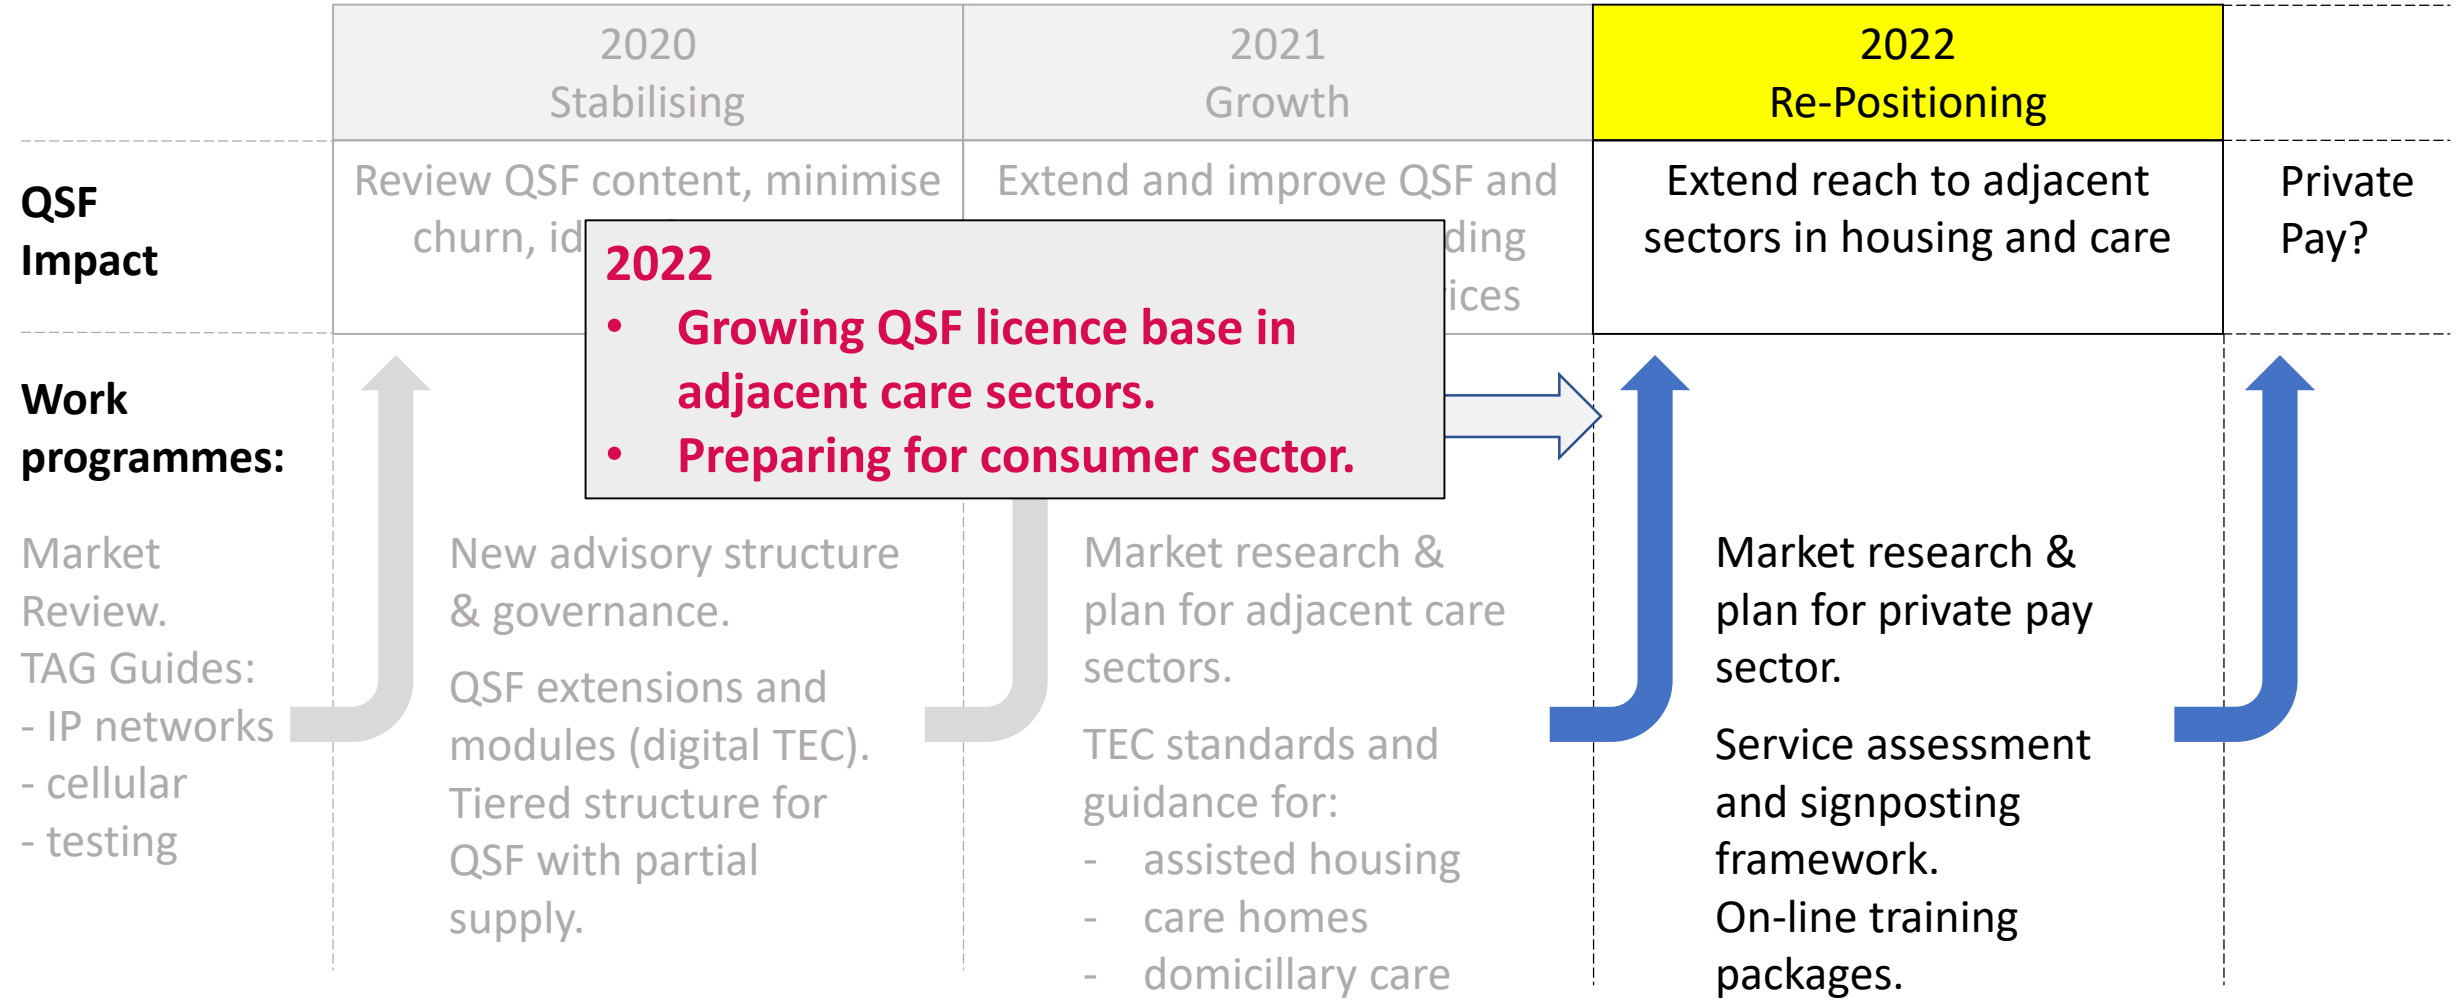

Roadmapping the changes

Roadmapping the changes

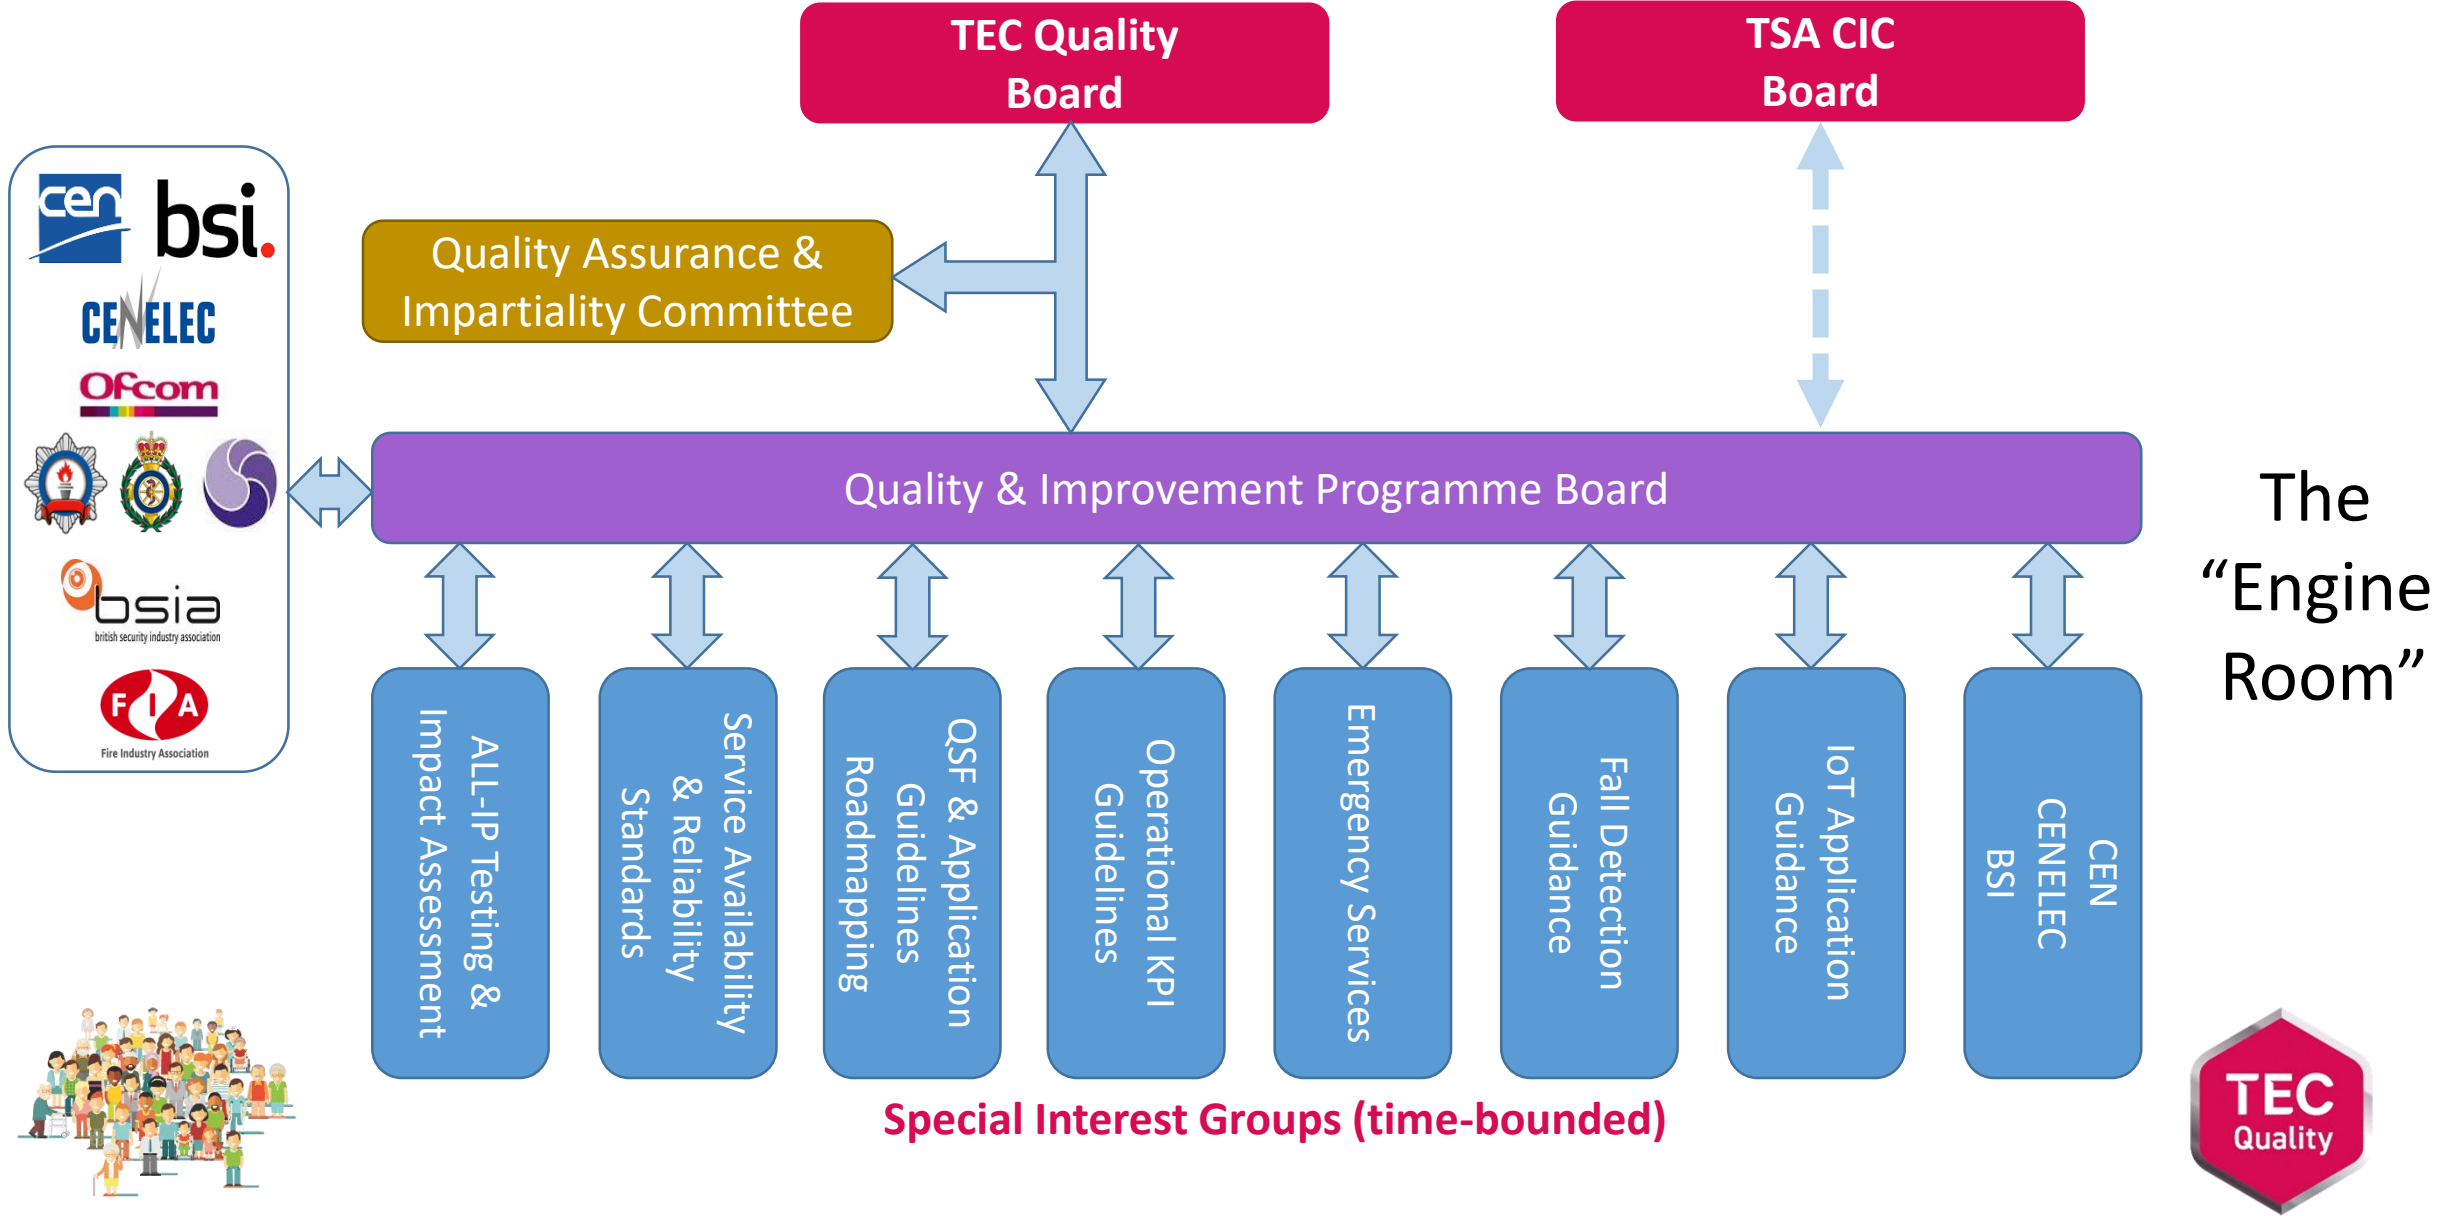

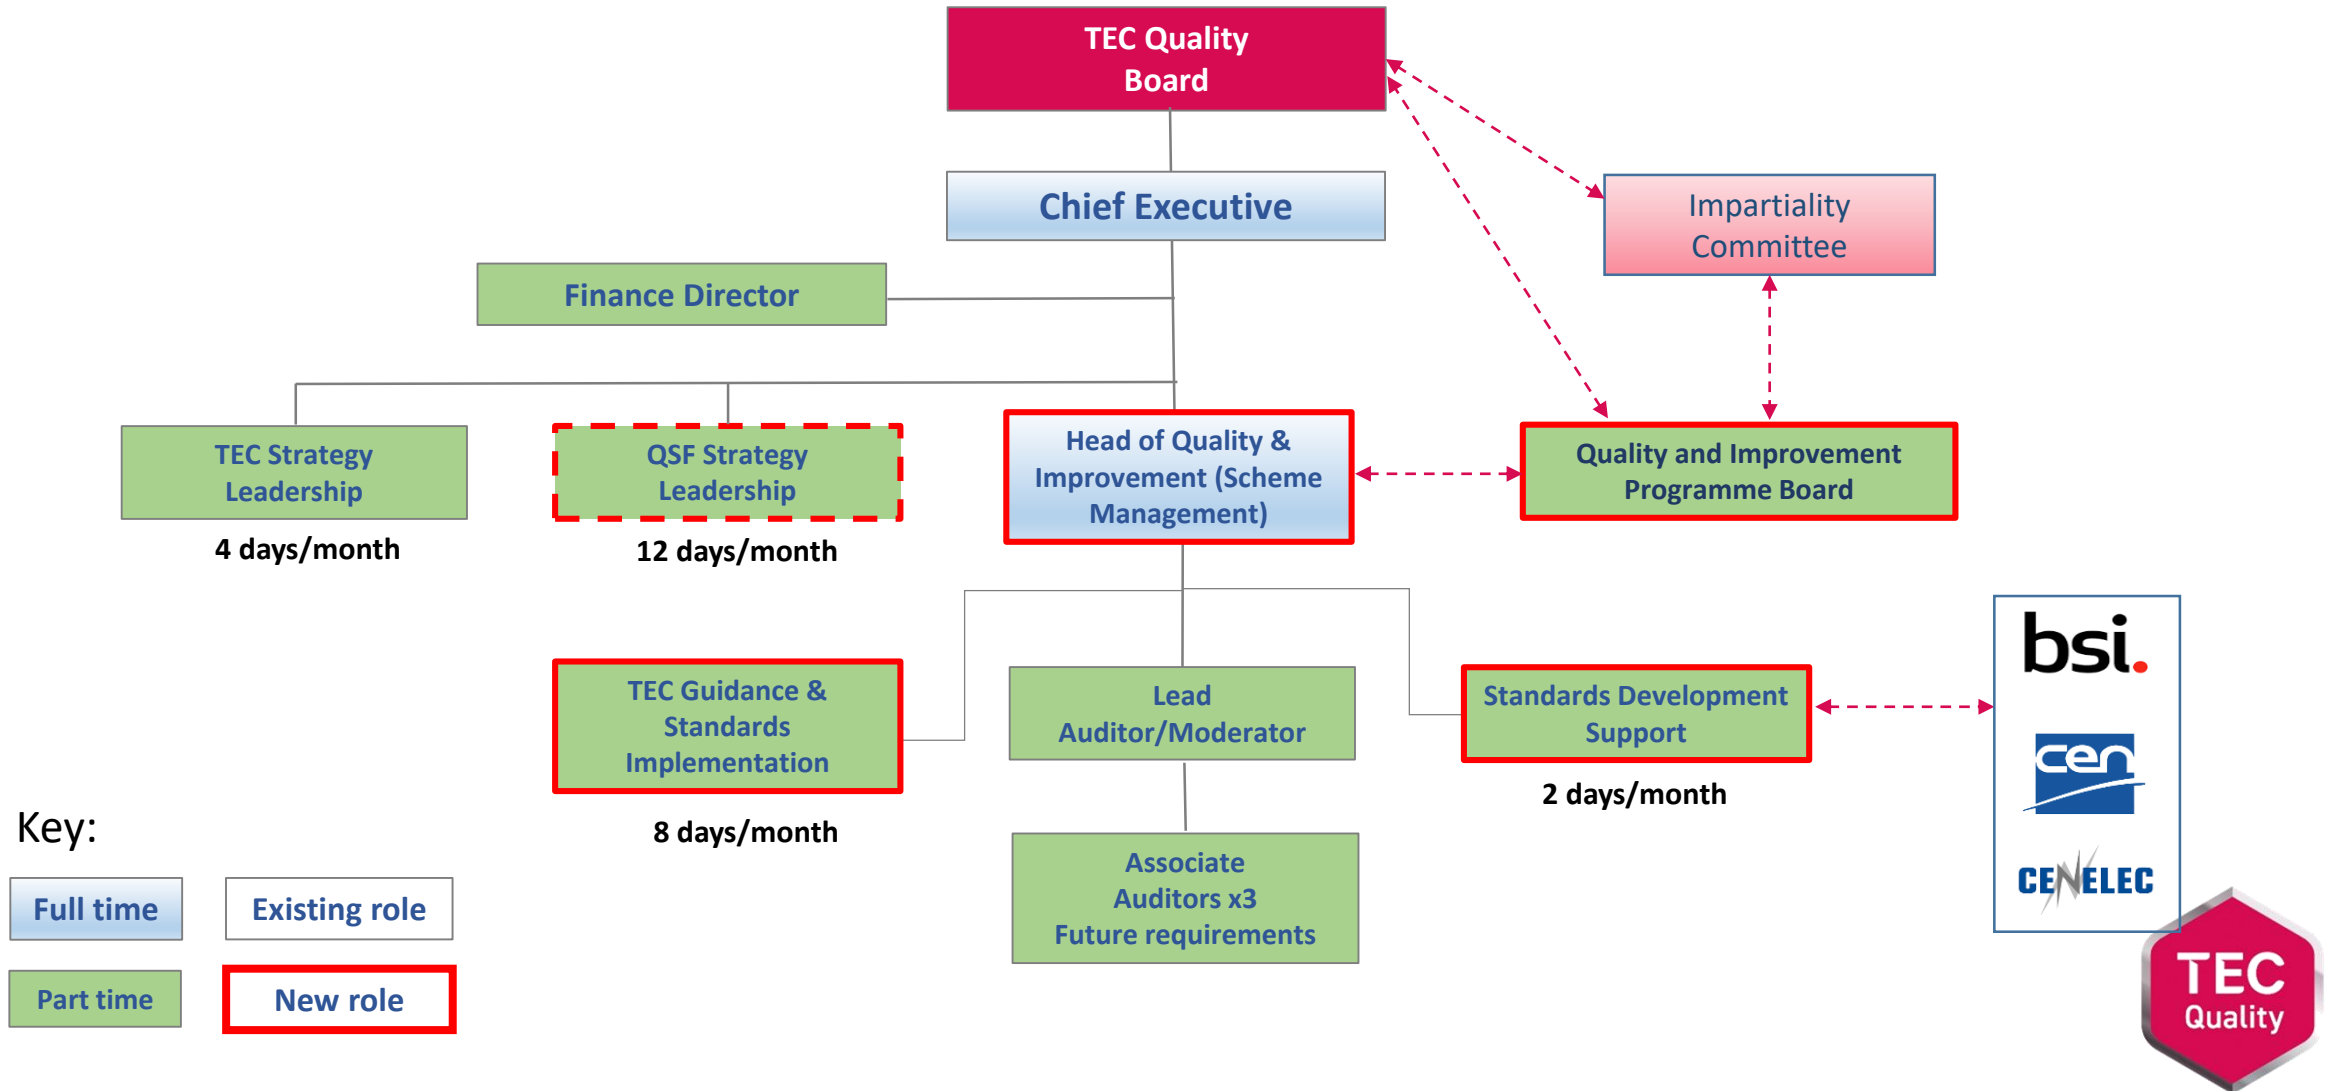

Roadmapping the changes

| | 2020 Stabilising | 2021 Growth | 2022 Re-Positioning | |
|-------------------------|--|---|--|--------------|
| QSF Impact | Review QSF content, minimise churn, identify priorities | Extend and improve QSF and service content, including digitally enabled services | Extend reach to adjacent sectors in housing and care | Private Pay? |
| Work programmes: | <p>Market Review. TAG Guides: - IP networks - cellular - testing</p> <p>New advisory structure & governance. QSF extensions and modules (digital TEC). Tiered structure for QSF with partial supply.</p> | <p>Market research & plan for adjacent care sectors. TEC standards and guidance for: - assisted housing - care homes - domicillary care</p> | <p>Market research & plan for private pay sector. Service assessment and signposting framework. On-line training packages.</p> | |

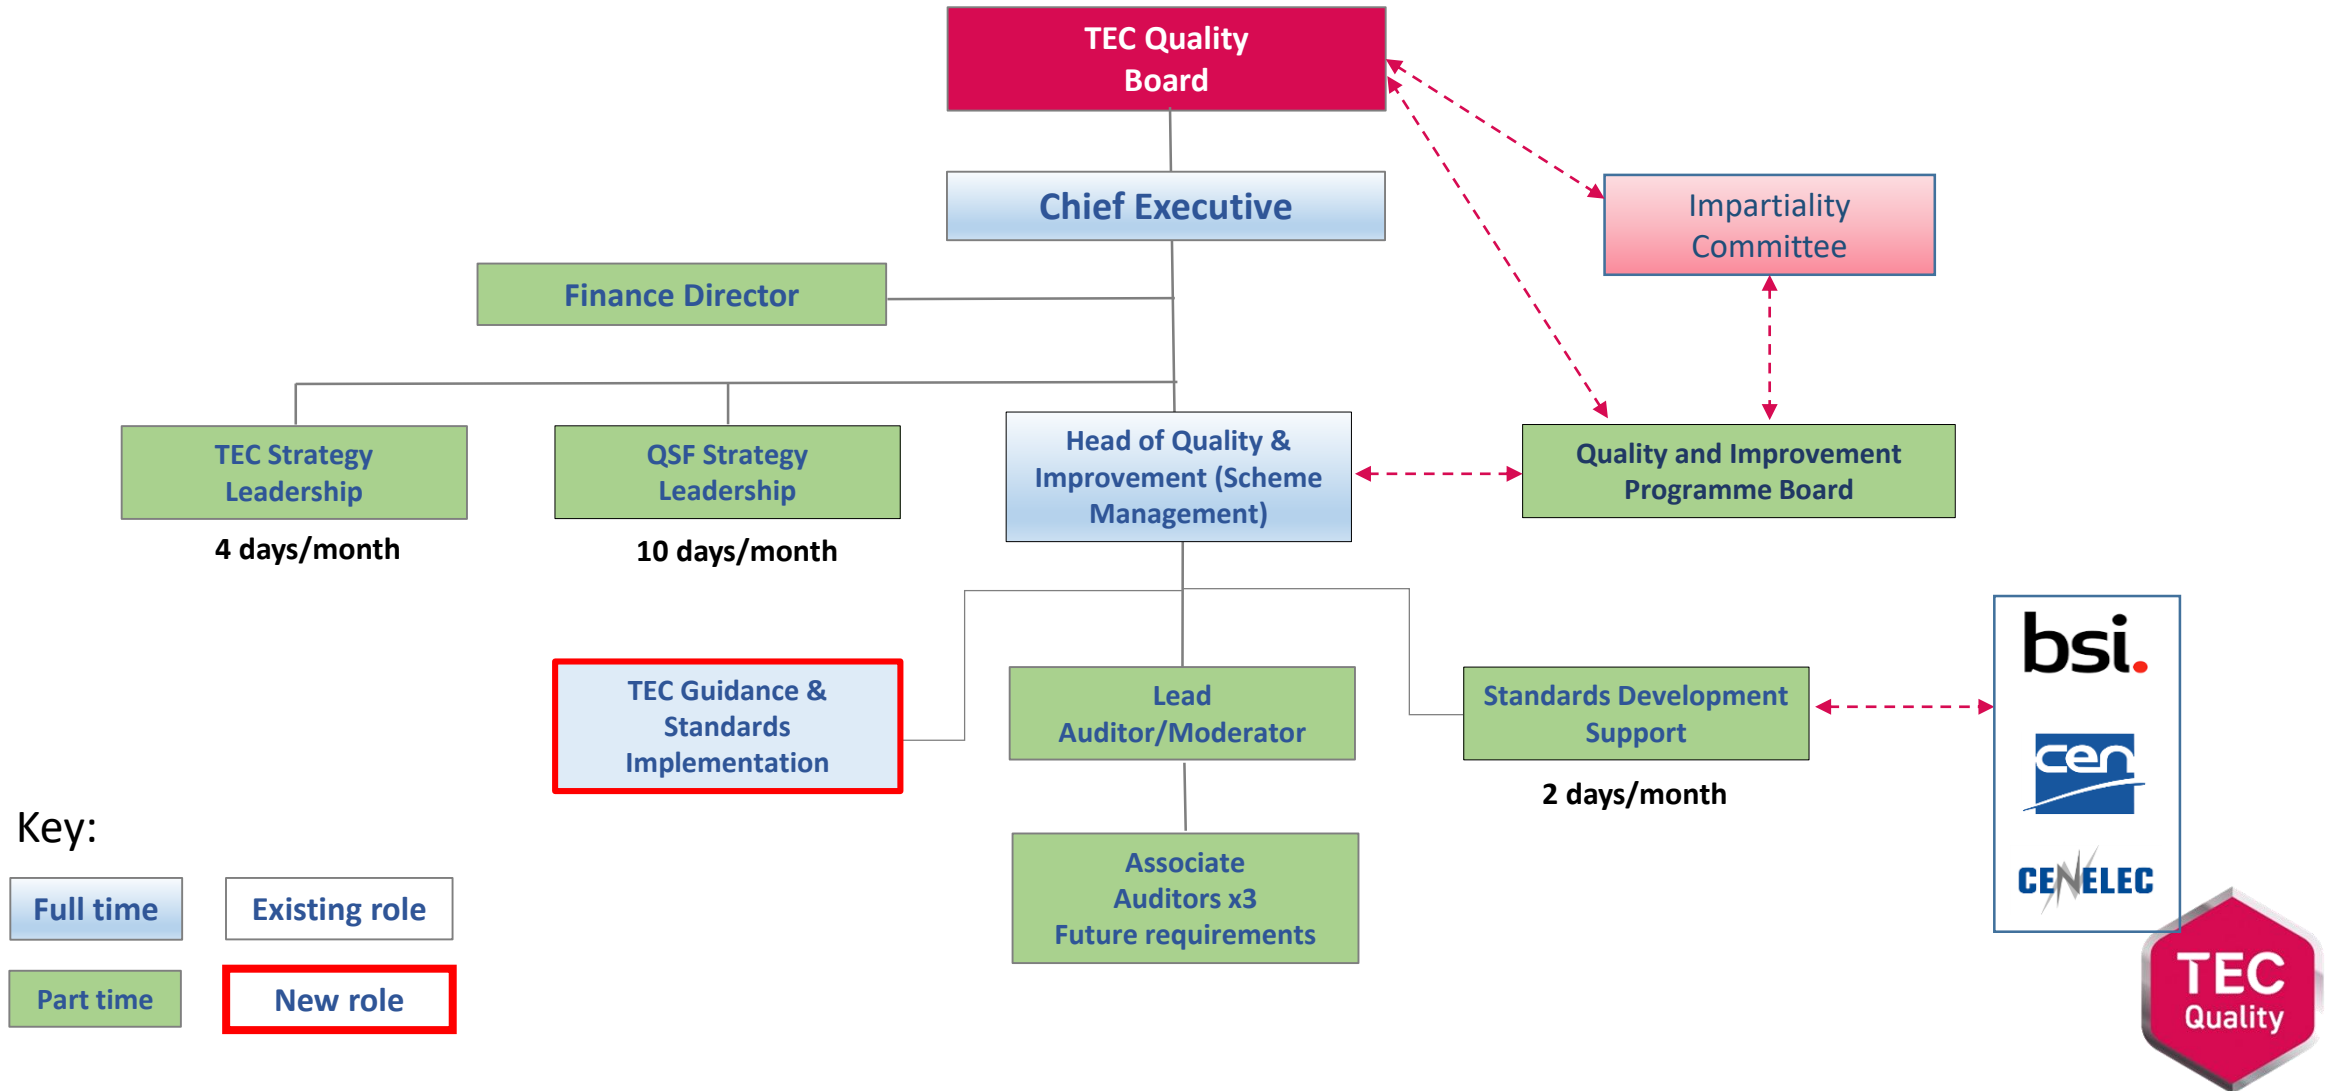

Advisory Group and Governance - Proposed Structure

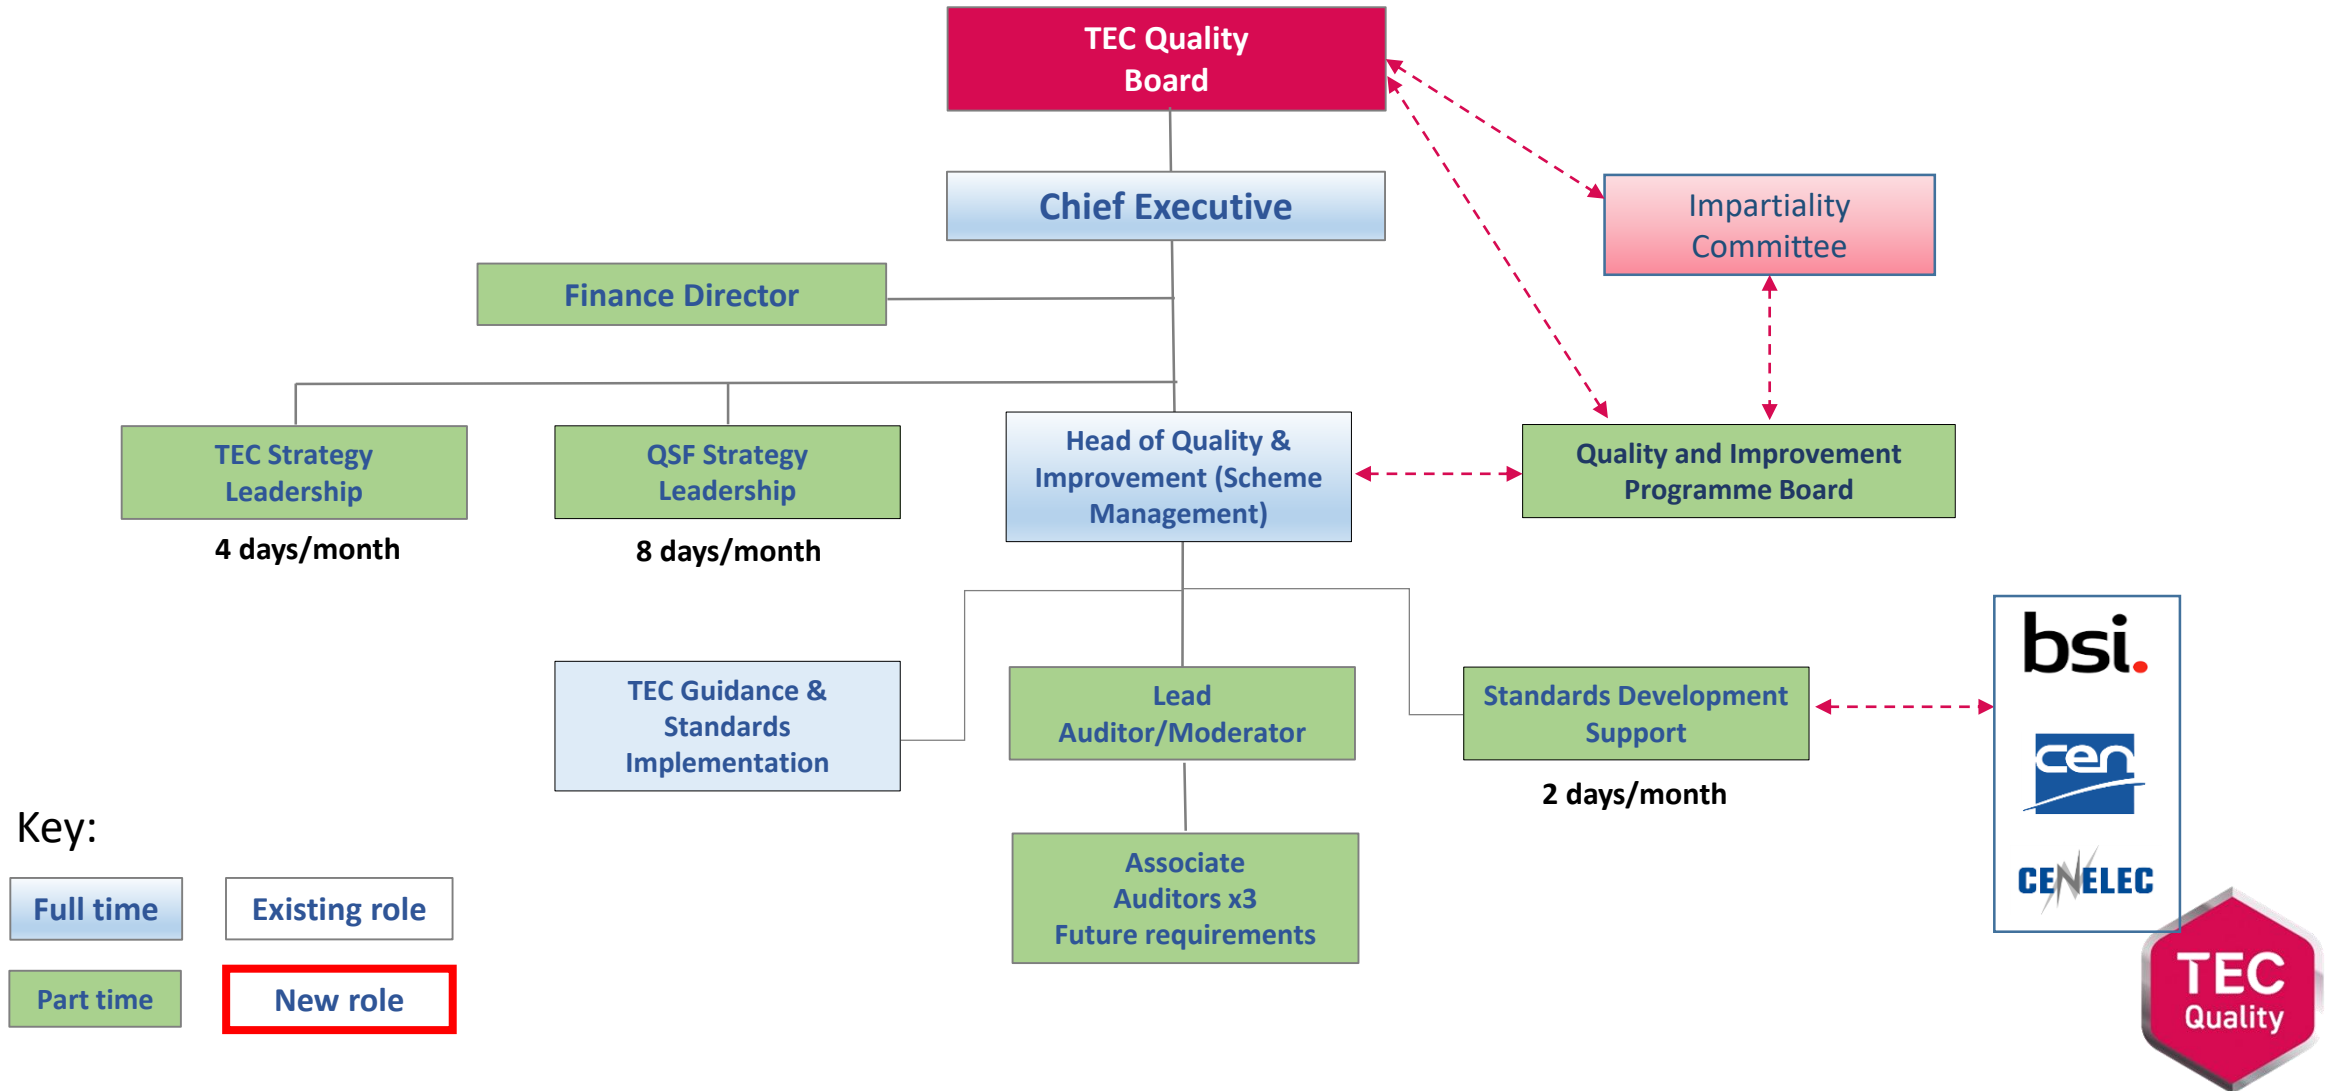

Proposed TEC Quality Organisation 2020 "Stabilise"

Proposed TEC Quality Organisation 2021 "Grow"

Proposed TEC Quality Organisation 2022 "Re-position"

Summary

- The TEC market is evolving to encompass
 - self-managed care
 - consumer-led services
 - data-enablement of services
 - a spectrum of technologies
- These developments and innovations will examine the quality assurance of TEC
- This creates opportunities and challenges for users of services, commissioners and providers
- A revised approach to Quality & Improvement is proposed
- TEC Quality will invest in an update to date, dynamic and collaborative assurance and accreditation

Measures of Excellence

Wendy Hodgson
TEC Quality Lead Auditor
