Positive disruption

Anette Stjerne Sales and Marketing Director Tunstall Denmark

How the use of **technology, data collection and analysis**

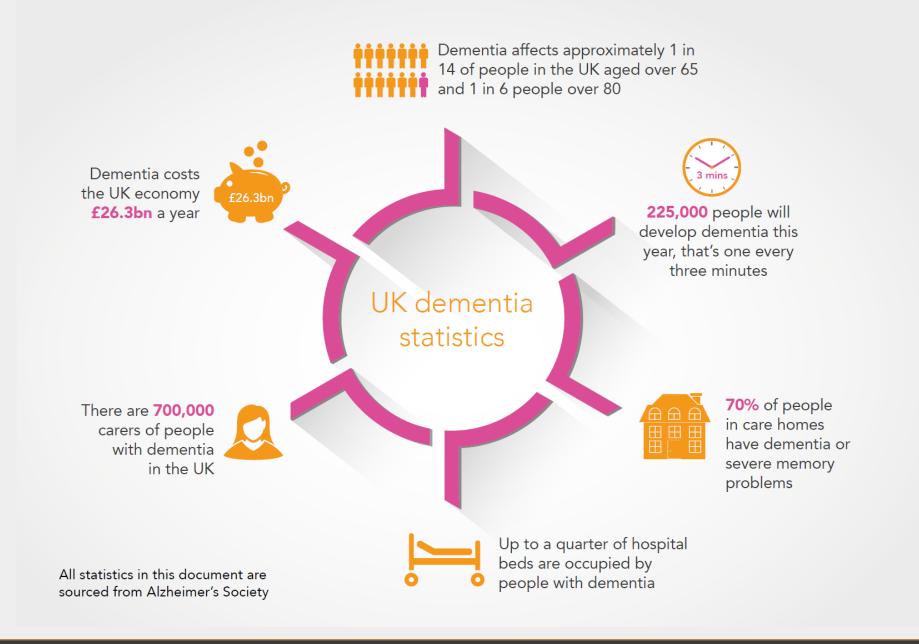

has enabled the shift from room-based care to person-

centred care, optimized the use of resources and enabled

people to live as freely and independently as possible.

Why?

tunstall.com

Private and Confidential

Since I became Prime Minister, fighting dementia – and helping those living with the condition – has been a personal priority of mine.

The fall-out on people's lives can be simply catastrophic. Those coping with dementia face the fear of an uncertain future; while those caring can see their loved ones slipping away.

Dementia also takes a huge toll on our health and care services. With the numbers of people with dementia expected to double in the next 30 years and predicted costs likely to treble to over £50 billion, we are facing one of the biggest global health and social care challenges – a challenge as big as those posed by cancer, heart disease and HIV/ AIDS.

But though the challenge is great, I believe that with the expertise of our scientists, the compassion of our care workers, the stoicism of the British people – and with real political will – we can meet this challenge. our NHS staff and over 100,000 social care staff trained in better supporting people with dementia. Our efforts on research have been world leading, with major research and infrastructure programmes now in place, supported by a doubling of research spending on dementia. We now spend well over £60 million on dementia research each year.

Now I want to see this work taken to the next level, building on all the brilliant work that's been done in three short years.

By 2020 I want England to be:

- the best country in the world for dementia care and support and for people with dementia, their carers and families to live; and
- the best place in the world to undertake research into dementia and other neurodegenerative diseases.

As we look to the future, it is clear that we all have a part to play. This is not just about

Prime Minister's challenge on dementia 2020
