Dementia statements

We have the right to continue with day-to-day and family life, without discrimination or unfair cost, to be accepted and included in our communities and not live in isolation or loneliness

Draft Dementia Technology proposals

Objective: To lead the world by ensuring people affected by dementia are empowered to live 'well' for longer using technology-enabled solutions to support self care

Objective: We create an environment which allows highquality and impactful dementia technology research and innovation to take place

Objective: All health and social care professionals are trained and educated to enable the use of technology-enabled care

Who are How Do I?

A technology company working to make a difference to the lives of people with dementia and their loved ones. They want to help people with a diagnosis live more independently at home for longer.

What is Refresh?

A mobile video support tool for people affected by dementia and their families. It includes a pair of mobile apps that can link helpful personalised videos to objects in your home. These videos can help with remembering how to complete a task, or capture memories of activities you've taken part in and don't want to forget.

'A picture says a thousand words. How many does a video say?'

Innovation Hub

Welcome to the Alzheimer's Society Innovation

This is your site - you can suggest projects, comment and question ideas and vote to decide which projects the Alzheimer's Society Innovation Team should work on and the solutions we develop, to enable people to live well with dementia. We'll also be sharing regular updates on ongoing projects. Get involved in our challenges and make a difference!

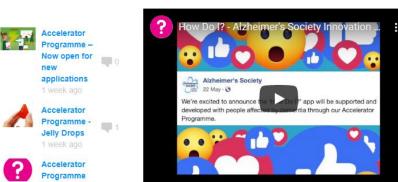

Our latest call for challenges is now open! Please suggest challenges and vote for your favourite to determine which Sprint Project the Innovation Team works on next.

News

Alzheimer's Society Innovation Hub

We want to hear from people with experience of dementia to decide what challenges we should tackle next.

By listening to people affected by dementia, we'll tackle the challenges that matter most.
