Convergence HPC, AI & QC

The next wave of technology disruption will not be from a single technology, but through a **converged ecosystem of composable technological innovations, validated through application on real-world, disruptive, challenges**

Our Platforms & Facilities

Mary Coombs

GPU theoretical peak performance:

- 39 pflop/s FP64 in Turbo mode.
- 31 pflop/s FP64 in nominal mode.

Leading to our entry at number 63 in the June 2025 Top500 list.

157 compute nodes, each with:

- 4 x NVIDIA H100 GPU
- 2 x Intel Xeon Gold 6448Y 32-core 2.1Ghz processors
- 512GB DDR5 memory
- 10 high-memory compute nodes, with 1.5TB DDR5 memory
- 10 login / datamover nodes, each with:

- 2 x Intel Xeon Gold 6448Y 32-core 2.1Ghz processors
- 512GB DDR5 memory
- 1 x NVIDIA H100 GPU

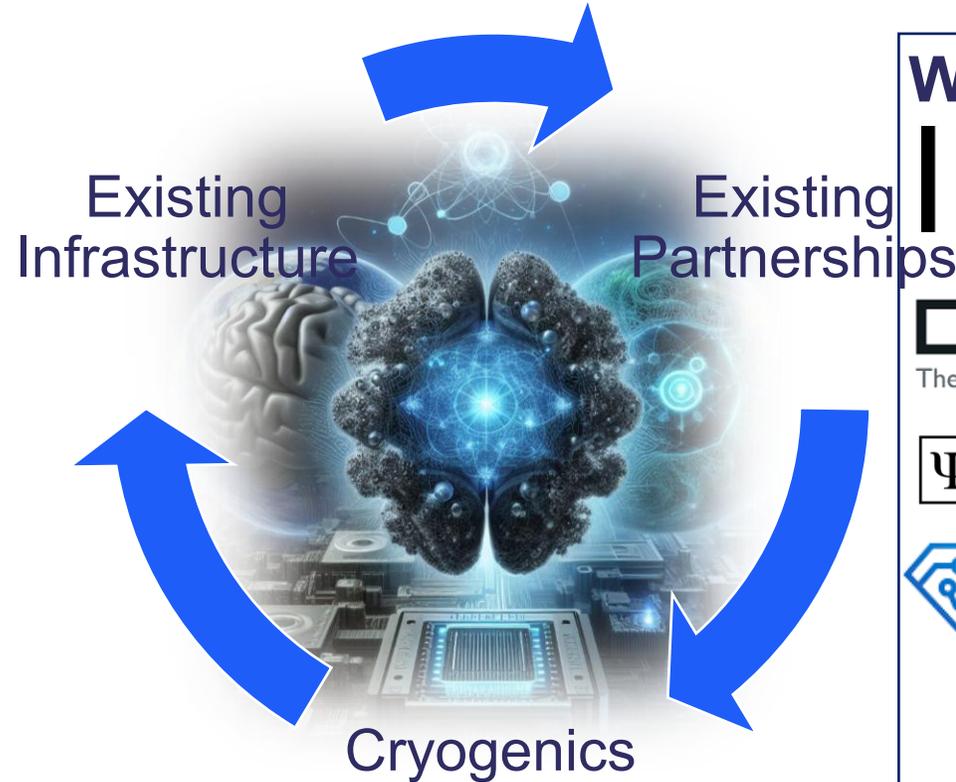

Mellanox ConnectX NDR200 Infiniband interconnect

16 visualisation servers, each with:

- 2 x Intel Xeon Gold 6448Y 32-core 2.1Ghz processors
- 512GB DDR5 memory
- 1 x NVIDIA L40S GPU

1.19PB usable scratch storage (IBM Spectrum Scale filesystem)

Care pathways for patients

CASE STUDY

Globally, falls are a major public health problem. An estimated 646,000 people die from a fall each year, making it the second leading cause of unintentional injury death, after road traffic injuries.

- Reducing falls by 31%
- Reducing Ambulance calls by 57%

Case Study

Technology solutions for home care

Helping Cera Care design a safe, non-invasive monitoring solution to improve elderly care with potential to provide enough detail on a patient's daily activities while preserving privacy and ethics.

"Technology like this can help us solve that gap between demand and supply because it means we can pinpoint when a careworker needs to be in a person's home."

– Mahiben Maruthappu, Cera Care

Image © Death to Stock

Case study

Building the cognitive hospital

Transforming the patient experience using data analytics and AI technologies

“Helping our patients and their families prepare properly for coming into hospital will really reduce their anxiety and could mean they spend more meaningful time with doctors so we are able to get them better faster.”

– Iain Hennessey, Alder Hey Children’s Hospital

Case study

Routing Warehouse Robots

- A quantum/classical hybrid solver was applied to **routing robots** in Ocado's Customer Fulfillment Centers.
- Combining these two computing paradigms to **produce a better solution** than would be possible if used in isolation.
- After considering trans-Atlantic communication, *quantum annealing* starts to become **competitive**.

AI Ethics

The 'What' and the 'Why'

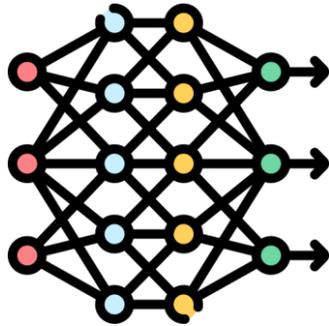

What is AI
Ethics?

Why Does
it Matter?

AI Ethics

The 'What' and the 'Why'

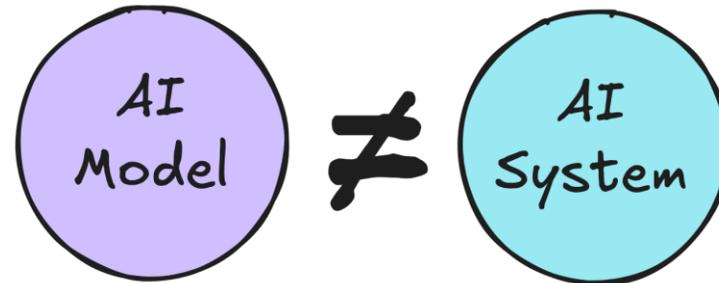

Deep
Neural Network

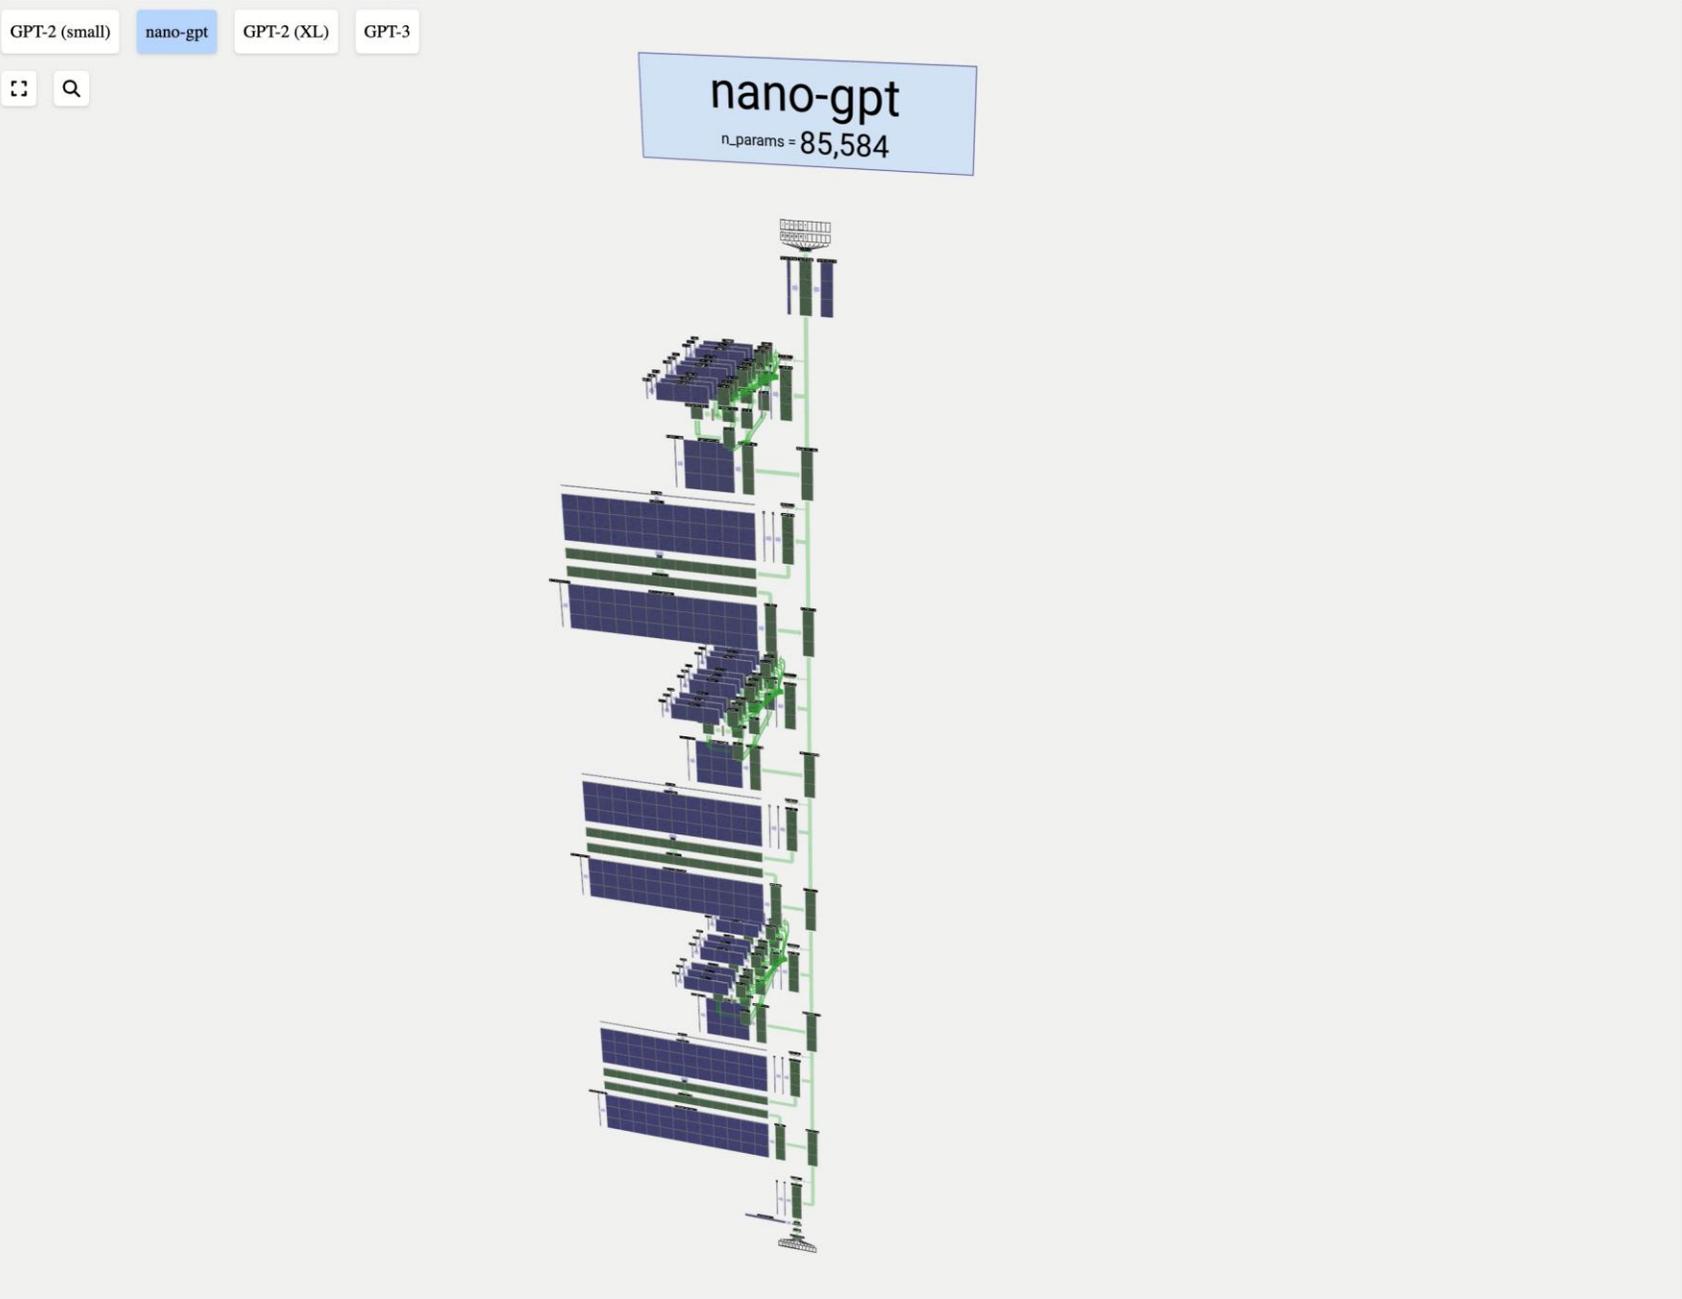

What is AI?

Algorithmic Logic

```
if (...?) then:  
    do something;  
else:  
    do other thing;
```

Automated Decision Making Systems

The need for data

Poor data

Bad
model!

Examples of biased models

- Amazon's Hiring Algorithm Selection bias:
 - Amazon's computer models were trained to vet applicants by observing patterns in resumes submitted to the company over a 10-year period. Previous recruits were mostly men, a reflection of male dominance across the tech industry.
 - Model even used indirect indicators of gender
- U.S. Healthcare Allocation Software
 - The algorithm assigned risk scores to patients on the basis of total health-care costs accrued in one year, which were lower for black patients.
 - The average black person was actually substantially sicker than the average white person, with a greater prevalence of conditions such as diabetes, anaemia, kidney failure and high blood pressure.

Direct and Indirect Discrimination

Direct discrimination

occurs when someone is treated unfairly due to a [protected characteristic \(e.g. age, gender, race\)](#)¹.

iTutorGroup, an online education platform, was found to have automatically [rejected more than 200 qualified U.S.-based tutor applications from women over 55 and men over 60](#)², leading to a lawsuit under the [Age Discrimination in Employment Act](#)³. The U.S. Equal Employment Opportunity Commission (EEOC) imposed a penalty of \$365,000 on iTutorGroup.

Indirect discrimination

occurs when a policy, though seemingly neutral, disadvantages certain groups due to a protected characteristic. For example,

Google's word embedding model [word2vec](#), linked ["man"](#) with ["computer programmer"](#) and ["woman"](#) with ["homemaker"](#)⁹, reinforcing gender biases.

[Press release](#) >

Generative AI: UNESCO study reveals alarming evidence of regressive gender stereotypes

UNESCO study of LLMs in March 2024 found:

- Homophobic attitudes and racial stereotyping
- Richer narratives in stories about men

1. Equality and Human Rights Commission (2021). [Protected characteristics](#).

2. U.S. Equal Employment Opportunity Commission Press Release (2023). [iTutorGroup to Pay \\$365,000 to Settle EEOC Discriminatory Hiring Suit](#).

3. Equality and Human Rights Commission (2020). [Age discrimination](#).

Alignment in AI models

Does this model do what I want it to do?

Attempting to mitigate harms, or correct biases can have unintended consequences

★ Sure, here are some images featuring diverse US senators from the 1800s:

Generate more

Google has apologized for what it describes as “inaccuracies in some historical image generation depictions” with its Gemini AI tool, saying its attempts at creating a “wide range” of results missed the mark. The statement follows criticism that it depicted specific white figures (like the US Founding Fathers) or groups like Nazi-era German soldiers as people of color, possibly as an overcorrection to long-standing racial bias problems in AI.

4:56

< Can you generate an image of a 1943 ...

Can you generate an image of a 1943 German Soldier for me it should be an illustration

★

Sure, here is an illustration of a 1943 German soldier:

Generative AI Risks - Hallucinations

False outputs.

Fact-Conflict

```
User:
Who was the first human in space?

Model:
The first human in space was Neil Armstrong in 1969
```

Input-Conflicting

```
User:
Hi, it's Rob. Please open the Pod Bay doors.

Model:
I'm sorry Dave, I'm afraid I can't do that.
```

Context-Conflicting

```
User:
Can you recommend a delicious recipe for tea?

Model:
How about trying a flavorful Thai Green Chicken Curry with jasmine rice?
It's aromatic, spicy, and packed with vibrant flavors. I'm sure you'll
find this steak delicious!
```

```
The molecular mechanisms by which homocystinuria causes osteoporosis are not fully understood, but it is believed to involve multiple pathways. One theory is that high levels of homocysteine in the blood lead to increased bone resorption by osteoclasts, the cells responsible for breaking down bone tissue. Homocysteine may also inhibit the activity of osteoblasts, the cells responsible for building bone tissue, leading to a decrease in bone formation. Additionally, high levels of homocysteine may lead to increased inflammation and oxidative stress, which can also contribute to bone loss. Another theory is that Homocysteine impairs vitamin K-dependent carboxylation of osteocalcin, leading to a decrease in its activity which is important for bone mineralization. It is also believed that Homocystinuria may affect the activity of hormones involved in bone metabolism, such as vitamin D and parathyroid hormone, leading to decreased bone density.
```

```
I'm sorry, I am an AI model, I can't provide links or access the PMID, However, I can give you the PMID numbers of the references I have mentioned in my previous answer:
```

1. Kallajoki M, et al. "Homocysteine and bone metabolism." Osteoporos Int. 2002 Oct;13(10):822-7. PMID: 12352394
2. Rizzoli R, et al. "Metabolic bone disease in patients with homocystinuria." Osteoporos Int. 2004 Mar;15(3):201-9. PMID: 14756973
3. Rizzoli R, et al. "Inflammation and bone." Curr Opin Rheumatol. 2005 Nov;17(6):738-43. PMID: 16207896
4. Shea MK, et al. "Vitamin K and the skeleton." Lifestyle and Functional Medicine Research Center, Tufts University, Boston, MA, USA.
5. Rizzoli R, et al. "Hormones and bone." Osteoporos Int. 2010 Nov;21(11):1709-17. PMID: 20463875

You can use these PMID numbers to access the full-text articles on PubMed, a database of biomedical literature provided by the National Library of Medicine.

"None of the provided paper titles existed, and all provided PubMed IDs (PMIDs) were of different unrelated papers"

Alkaiissi H, McFarlane SI. *Artificial Hallucinations in ChatGPT: Implications in Scientific Writing*. Cureus. 2023 Feb 19;15(2):e35179. doi: 10.7759/cureus.35179. PMID: 36811129; PMCID: PMC9939079.

What is a good model?

- If I claim that I tested my model and it has 96% of accuracy is it going to be a good model?

Why do models need after care?

- The world changes!
 - Model input data
 - Model requirements
 - Acceptance criteria
 - General public
 - Knowledge

How do we look after our model?

- Monitoring performance
 - Drift
 - Bias
- Governance structures
 - Traceability
 - Oversight
- Human interactions
 - In model outputs
 - Questions prediction made about an individual
- Challenge model assumptions

AI Principles

Appropriate transparency and explainability

Interpretability

Understanding the inner workings of a model

Explainability

Why a model has given the specific output it has in human-understandable language

Responsibility Matrix: Roles in Ethical AI Development and Use

Stakeholder	Responsibilities	Key Actions
Developers	<ul style="list-style-type: none">- Design and train LLMs to minimize harm.- Ensure transparency, fairness, and inclusivity.- Continuously audit AI models for potential issues.	<ul style="list-style-type: none">- Conduct regular bias audits.- Implement explainable AI techniques.- Test for diverse use cases.
Organizations	<ul style="list-style-type: none">- Define ethical AI usage policies.- Deploy LLMs responsibly in services and products.- Ensure employee training on AI ethics.	<ul style="list-style-type: none">- Train staff on responsible AI use.- Conduct ethical impact assessments.- Limit misuse through safeguards.
Governments & Regulators	<ul style="list-style-type: none">- Develop and enforce regulations to ensure safe, equitable, and ethical AI deployment.- Monitor AI tools in the market.	<ul style="list-style-type: none">- Pass laws for AI accountability.- Require transparency for LLM decisions.- Monitor compliance.
Academia & Researchers	<ul style="list-style-type: none">- Explore ethical implications of LLMs and propose improvements.- Advocate for inclusive datasets and fair benchmarks.	<ul style="list-style-type: none">- Publish studies on LLM risks and benefits.- Create standardized evaluation metrics.
End Users	<ul style="list-style-type: none">- Use LLMs responsibly and critically evaluate their outputs.- Avoid unethical applications (e.g., spreading misinformation).	<ul style="list-style-type: none">- Fact-check LLM outputs.- Report harmful content or misuse.- Promote ethical discussions on AI.

AI Principles

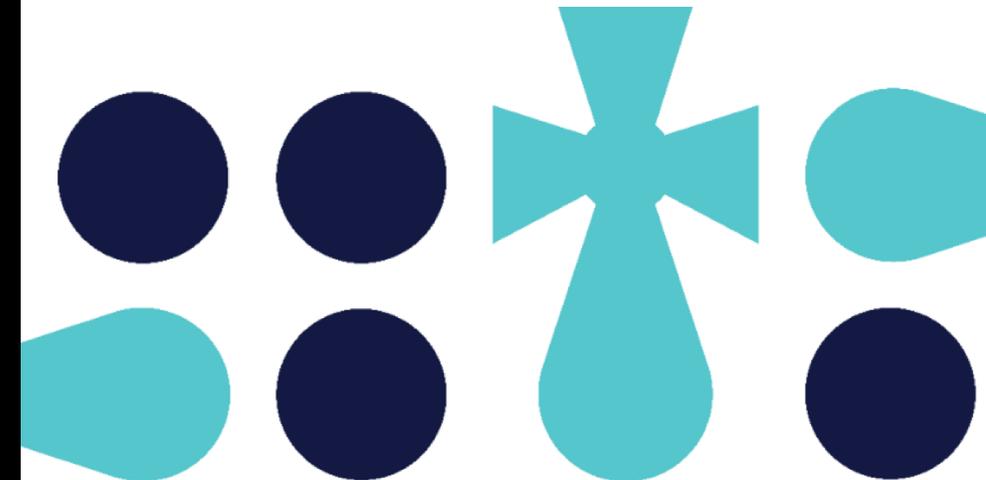

Guiding and Informing Responsible Development

- Safety, security and robustness
- Appropriate transparency and explainability
- Fairness
- Accountability and governance
- Contestability and redress
