

# Next Generation Telecare

# Market turbulence

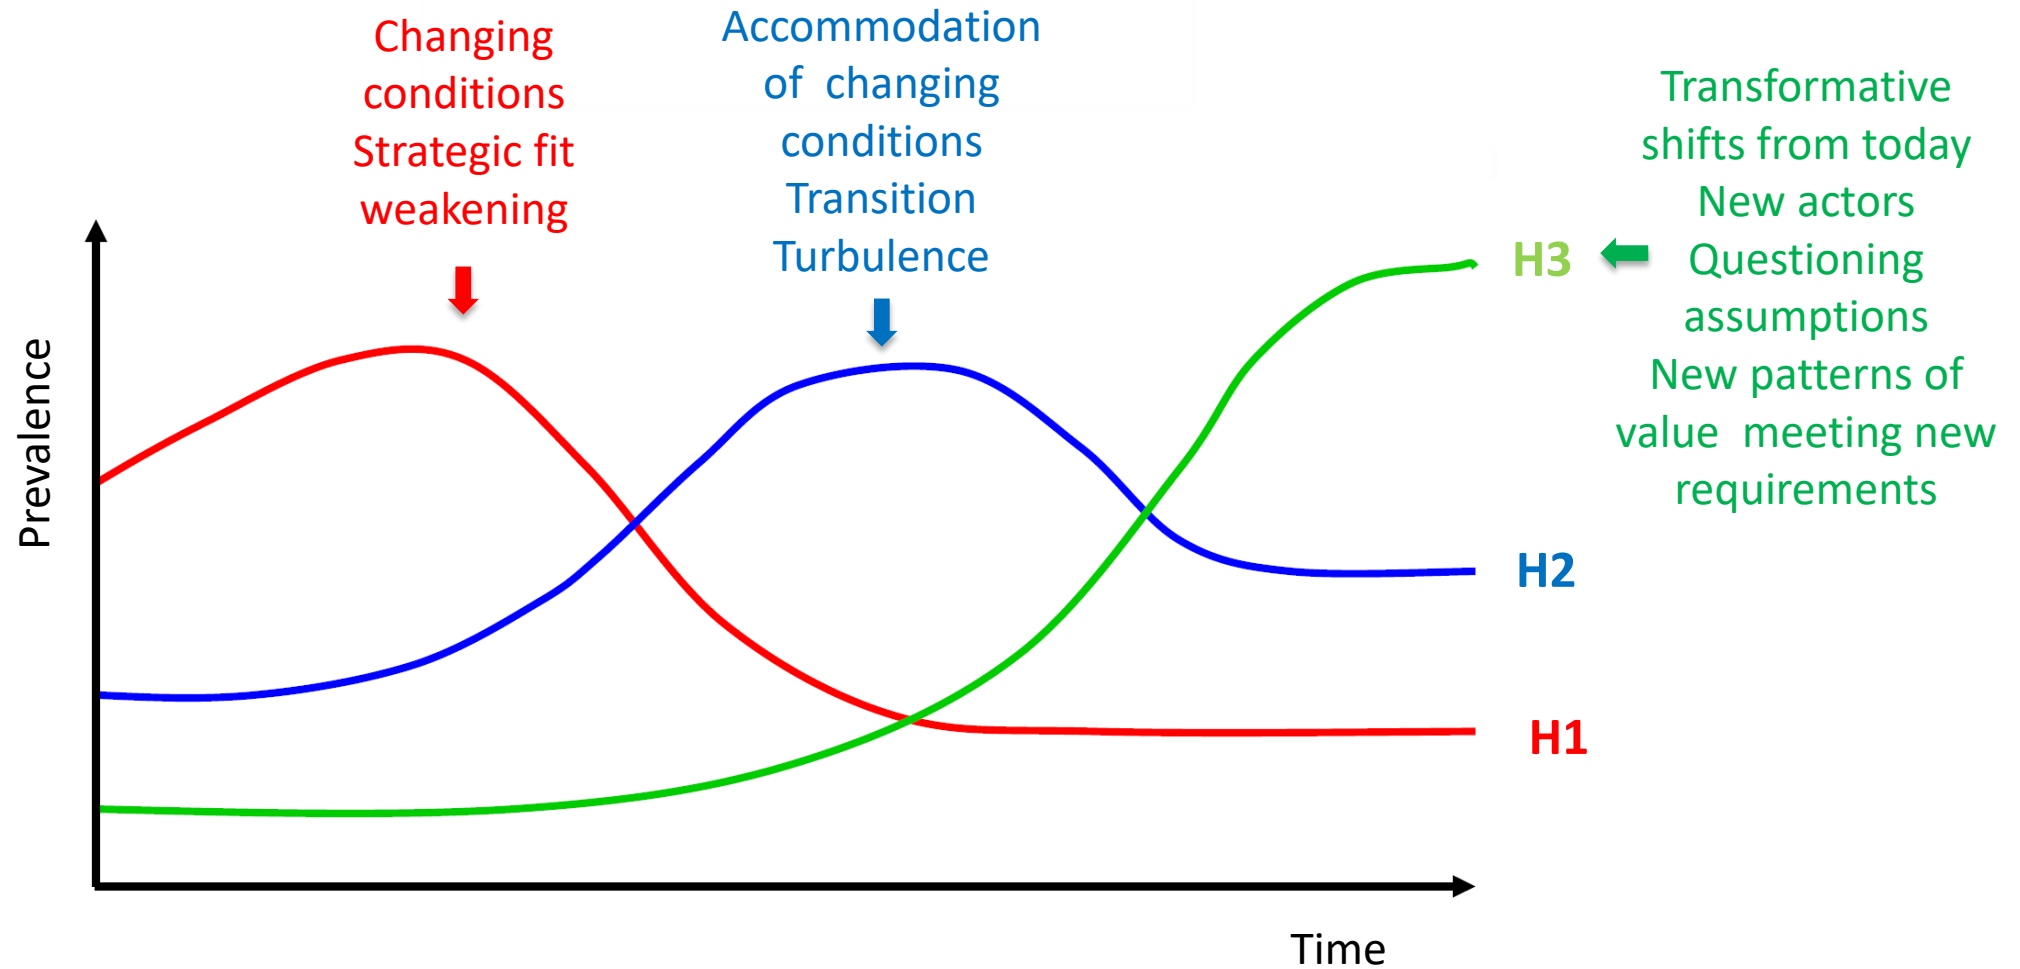

Care technology market will be in considerable flux over the next five years due to

- **Digital switchover**
- **Market consolidation** of monitoring centres
- Which of the many digital telecare suppliers will be able to achieve **scale** is as yet unclear.
- How quickly the industry will achieve open **interoperability with health and social care data**.
- The potential from gaining **significant insight** from the available data.
- The **consumer technology** / smart home market is rapidly crossing over into the care technology sector.

## Covid19 effect

Whilst celebrating how TEC has responded to the emergency, we also need to recognise that alarm monitoring services that are purely reactive in their scope offer only part of the solution. Effective TEC responses to Covid-19 have adopted increasingly proactive and preventative models of care.

# Innovation & Market Change - Three Horizons model

# Delivering a New Vision

## H1 and Digital veneer Telecare (H2)

Reactive only (alarms)

Intervene to minimise consequences of the event

Business friendly

Mainly professional staff involvement

No use of data

Analogue or with digital connectivity

Only Social Alarm frequency devices

Closed and proprietary

## Next Generation Telecare (H3)

Proactive and reactive (alerts and alarms)

Intervene early before the event (preventative)

Consumer friendly

Expand the circle of care – family

Intelligent use of data (actionable insights)

Digital first

Social Alarm and third party IOT devices

Open and interoperable

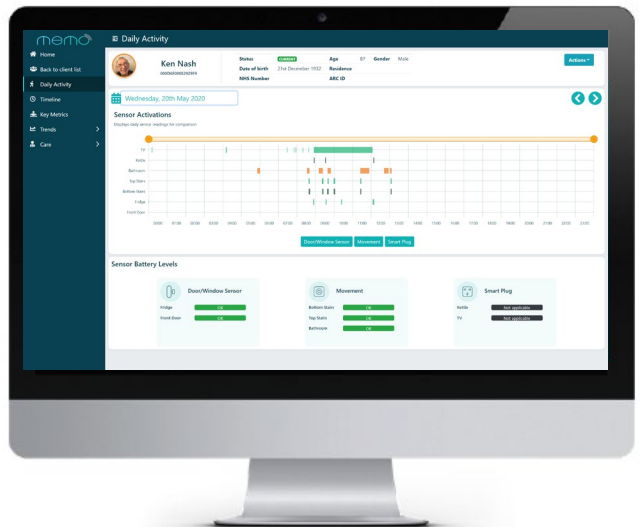

# Memo Next Generation Telecare Suite

Designed from the ground up by Alcuris

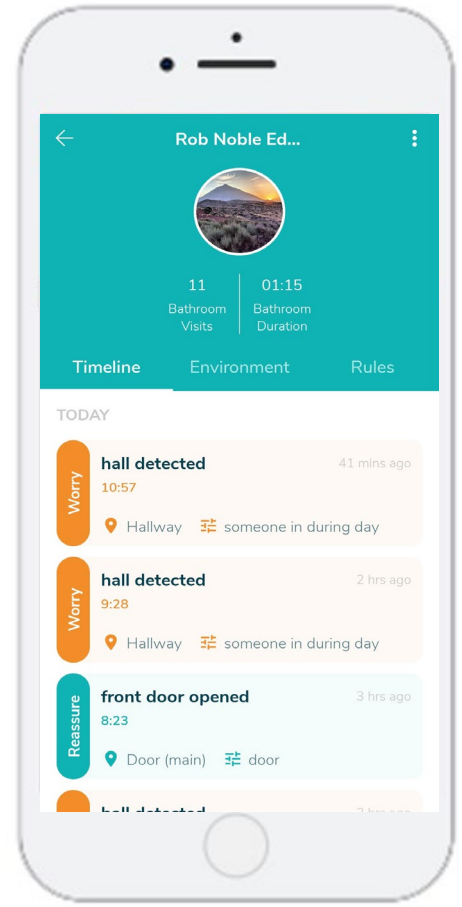

Call Monitoring Centre

IoT Sensors

Secure Database (AWS)

# Memo Hub capability

## Reactive

Telecare 869Mhz. Sensors  
Alarm calls with speech

## Proactive, prevention

Activities of daily living IoT sensors  
Preventative alerts

## Proactive, prevention

Telehealth Bluetooth sensors  
Preventative alerts

Coming 2021

## Carer/Responder logging

RFID fob

# Breaking down 'alerts'

1

## Rules

Manually adjusted rules for when to trigger an alert

2

## Enhanced Rules

A single rule that cover a number of sensors

3

## Smart Alerts - Realtime

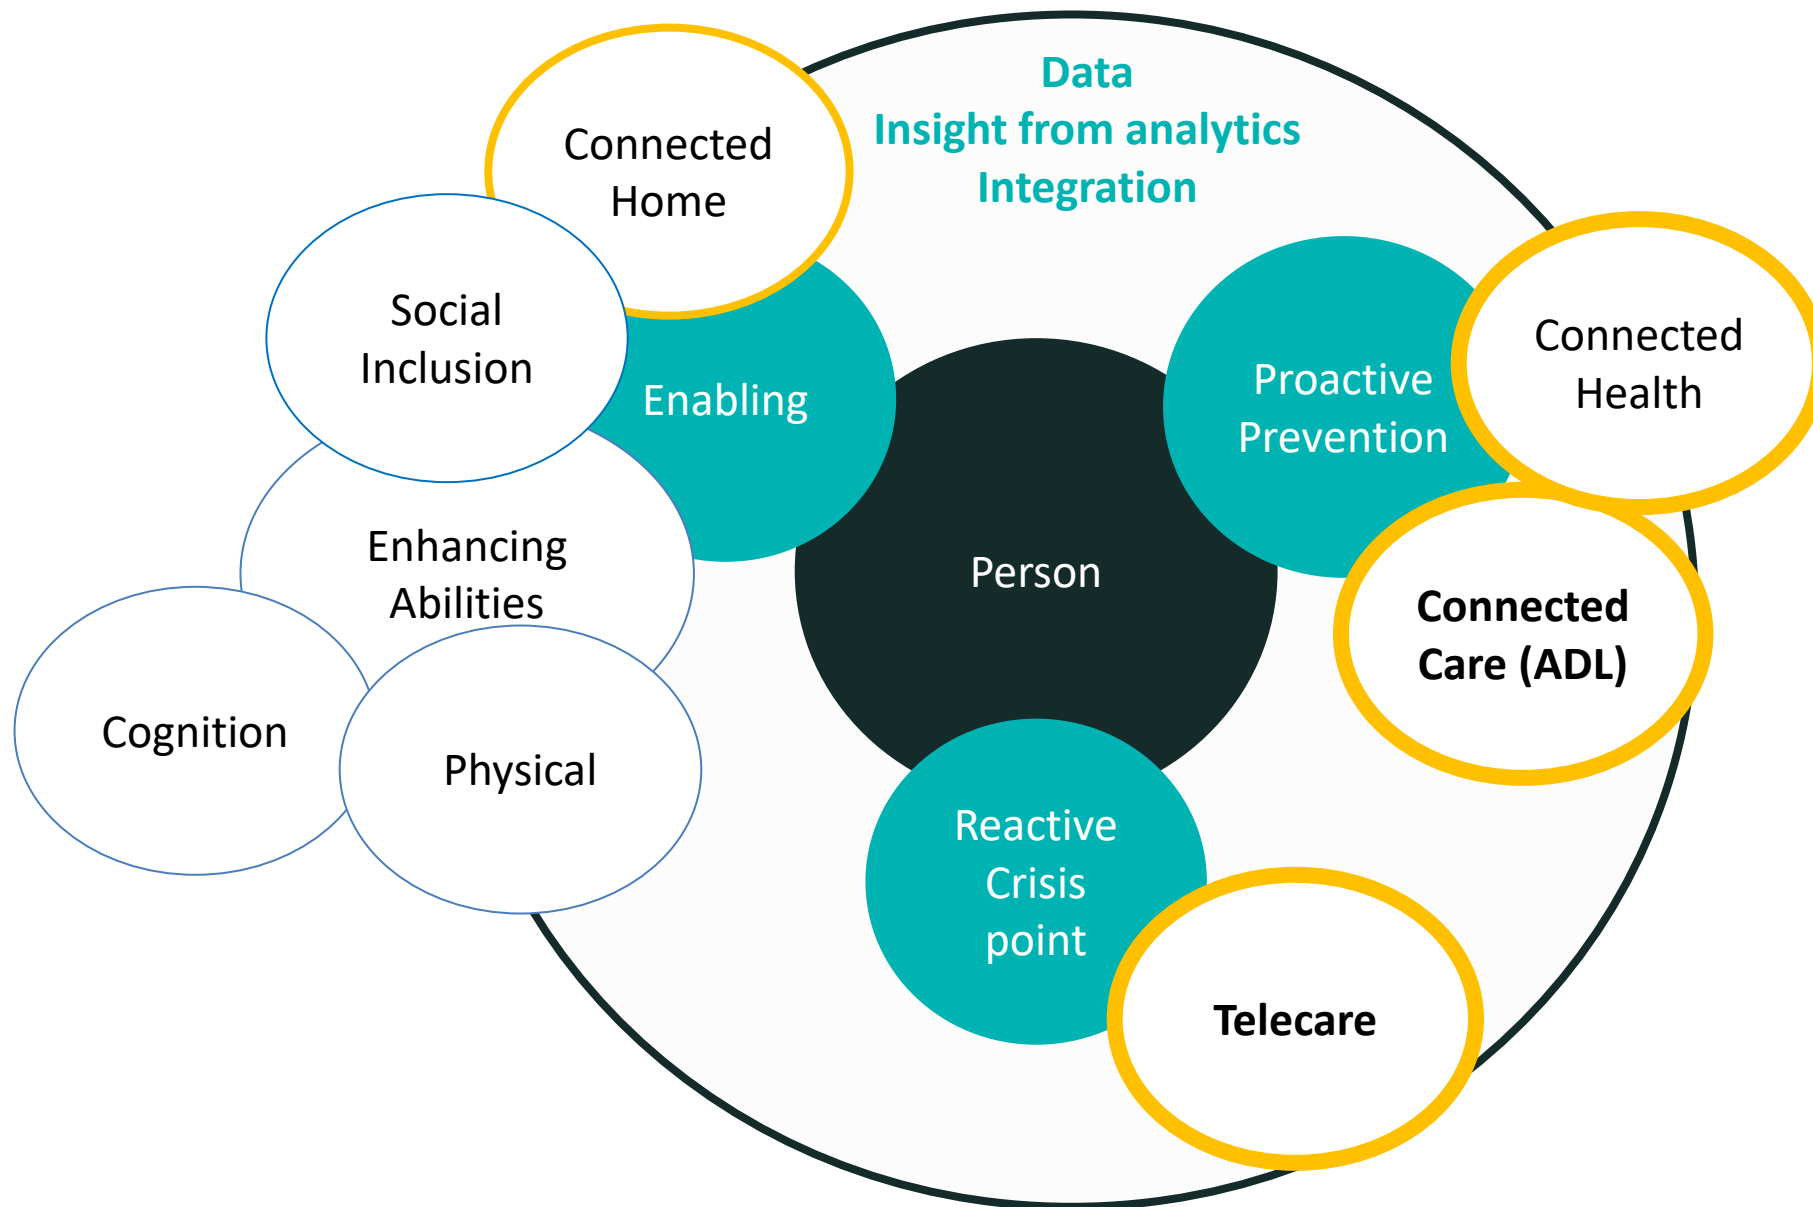

Alerts based on real-time changes in normal behaviour – leaving door open

4

## Smart Alerts – 24h

Alerts based on changes to normal daily routine over last 24h – more bathroom visits

# Digital Services to support people

Providing

- Independence
- Positive reassurance
- Insight and prevention

Delivering the right type and amount of care, in the right setting and at the right time

Underpinned by

- Consent
- Data sharing models
- Cybersecurity
- Services model .
