

An elderly couple is shown from the back, embracing each other. The man is on the left, wearing a grey jacket, and the woman is on the right, wearing a dark blue jacket. They are looking out over a vast, misty, green valley. The background is soft and out of focus, with rolling hills and a light mist. The overall mood is peaceful and contemplative.

The Connected Care Platform

Using Actionable Insights to Support Better Care Decisions

Actionable Insights
support better decision
making

Meet Dorothy

- Dorothy is 90 years old.
- Her family live far away.
- She had 3 companionship visits a week from Home Instead
- Family were worried about social isolation
- Care Manager had concerns that Dorothy wasn't coping and was trying to hide this.

What did Anthropos see?

The Care Manager combined the Actionable Insights that provided with observations from the CAREGiver:

- Decreased use of the microwave
- Door sensor not triggered for days
- Increased time in bed during the day

The Impact of Anthropos

- Factual evidence for the family and office to discuss
- Accepted changes to the care plan
- An increase in care hours
- Dorothy remains in her own home

- **Are they OK?**
- **Do they need help right now?**
- **Is something changing that should be looked at?**

**Support people to stay
in their own homes**

A photograph of an elderly woman with white hair and a pearl necklace being held by a younger woman. The text "Give families reassurance & peace of mind." is overlaid on the left side of the image.

**Give families reassurance &
peace of mind.**

Better care experience
Better care outcomes
Better use of time & resources
