The voice of technology enabled care

Strategic Priorities for Technology Enabled Care

Data integration

Facilitated by Sir David Pearson, Chair, TEC Quality

Support by Saeed Choudhary, Legrand Care

The voice of technology enabled care

Strategic Priorities for Technology Enabled Care

Data integration

Should this be a strategic priority for TSA?

The voice of technology enabled care

Strategic Priorities for Technology Enabled Care

Data integration

This is a broad and ambitious agenda and we see (at least) two phases

The first building on our position as an externally validated QA system to provide confidence in TEC data sources and allow integration with formal data (health / care / housing).

The second is exploring opportunities for broadening the scope to consumer-generated data (e.g. wearable devices and even data not specifically collected for health/care purposes).

This takes TSA into new territory and will require us to work with and influence a broader range of partners – **is this the right direction of travel?**

Strategic Priorities for Technology Enabled Care

Data integration

What (if anything) might we need to do differently in different nations?
